

## FABRIC

Please follow the below steps to ensure good fabric tension is accomplished.

refresh®

### **Attaching Fabric Graphics is very simple. An example of attaching 1 fabric panel is detailed below:**

- + If the panel has a support post behind it, ensure it is in place if you can't access it once the panel is up.
- + Take the top left corner of the fabric and insert the silicone strip into its associated position on the hardware - insert just enough to hold it in place. *(if the panel is wrapped, start with this as it can otherwise become too tight).*
- + Move across to the top right corner and do the same - the fabric should now dangle without the aid of any persons.
  - + Do the same in the bottom corners so all 4 corners are now in place.
- + Finally, from the centre of all 4 edges, push the rest of the silicone into the channels working your way towards the corners. This ensures a good, even tension across the whole panel.

**Summary:** All Corners First, Middles working out, Perfectly Stretched Fabric
