

# TV MOUNT

Please follow the below steps to complete the construction of your TV MOUNT

Image above shows the arrangement of the TV Mount immediately prior to completion. Follow the following steps to get to this stage.

**Step 1.**  
Push the connections at the end of the **TV BARS** into the channels on the verticals on the panel where the TV will be located. The height of each bar should be judged by where the **TV MOUNTS** are located on your specific TV.

Once they are in the right locations (and level), turn the thumb screws (**which need to face the back of the stand**) to tighten them in place.

**Note:**  
You may want to measure the distance from the top of the TV to the Refresh **TV MOUNTS** to make sure that the TV sits at the correct height when mounted.

**STEP 1**

**STEP 2**

**Step 2.**  
You can check the positioning of the **TV BARS** by offering up the TV with the **TV MOUNTS** attached onto the bars (without any fabric in front). Adjust as necessary.

**Step 3.**  
The **TV MOUNTS** should sit over the **TV BARS** as shown. These mounts should support the TV screen as shown. Once you are happy with the TV location, mark on the **TV BARS** with a pen where they are sitting.

**STEP 3**

**STEP 4**

**Step 4.**  
Once the **TV MOUNTS** are in the desired position, cut the four holes out in the fabric panel in relation to the **TV MOUNTS** location. You can do this by putting the fabric panel in place and then cutting an upside down 'T' shaped hole along the points marked on the **TV BARS** in Step 3. These holes are where the **TV MOUNTS** will push through. A final hole may be needed for a power cable. The location will be specific to your TV type.

**Note:**  
The holes in the fabric should be cut with a sharp blade around 30mm wide and 15mm tall. Please be careful when using the knife, and wear protective gloves when doing so.

You are now in the position shown below, now simply push the **TV MOUNTS** through the holes and over the **TV BARS**. Ensure the **MOUNTS** drop fully over the **BARS** before releasing.
